Fund model: capital calls, distributions, NAV, IRR, DPI / RVPI / TVPI, LP statement

Synthetic $100mm growth fund, 40 quarters. Illustrative only - no real fund or investor data.

Sheet map	Inputs (commitments, terms, NAV loan, as-of date) -> Fund (quarterly engine incl. loan schedule and a no-loan shadow case) -> Returns (metrics + chart) -> NAV Loan (with vs without comparison) -> LP Statement (per-investor capital account) -> Checks.
Colour code	Blue = input | Black = formula | Green = link from another sheet | Yellow = key assumption or selector.
Capital calls	During the 5-year investment period, calls each quarter = investment + management fee + fund expenses. Investments are 85% of commitments spread evenly.
Distributions & NAV	Portfolio grows at the gross return; a rising share of it is realised each quarter from the first exit quarter, and the rest is liquidated in quarter 40. Investor NAV = portfolio value less accrued carry.
NAV loan extension	A single draw against portfolio value (advance rate x portfolio value, capped) in the chosen quarter. Interest is paid in cash each quarter, exit proceeds sweep the balance down, the net draw is paid out as a special distribution, and investor NAV is net of the loan. Switch it off on Inputs!B35; the NAV Loan sheet always shows both cases.
Metrics	DPI = distributions / paid-in. RVPI = residual NAV / paid-in. TVPI = DPI + RVPI. XIRR uses dated quarter-end flows, with NAV as the terminal value at the as-of date.
Simplifications	(1) Carry is 20% of profit after return of paid-in capital - no preferred return, catch-up or clawback. (2) All investors pro rata, GP commitment included. (3) No fund-level cash or recycling; the only leverage is the optional NAV loan (single draw, no covenants, fixed rate). (4) Flows at quarter-end. (5) Fees post-investment period are netted from distributions.

Key outputs (live)

As-of date	**31-Dec-2028**
Paid-in capital ($mm)	**95.8**
Distributions ($mm)	**76.3**
Residual NAV ($mm)	**55.7**
DPI	**0.80x**
RVPI	**0.58x**
TVPI	**1.38x**
Net IRR	**11.2%**
Gross IRR	**18.0%**
NAV loan on? (1 = yes)	**1**
TVPI without loan	**1.39x**
Net IRR without loan	**11.2%**
Model integrity	**ALL CHECKS PASS**

Fund model - Inputs

SYNTHETIC illustrative fund. Blue = input, black = formula, green = cross-sheet link, yellow = key assumption. US$ millions.

Fund name	Sample Growth Fund I, L.P. (synthetic)
Units	US$ millions

Investor commitments	Commitment ($mm)	% of fund	
LP A (institutional)	40.0	40.0%	*Names are synthetic. All investors are treated pro rata to commitment, including the GP commitment (no fee/carry waiver modelled).*
LP B (family office)	30.0	30.0%	
LP C (fund of funds)	25.0	25.0%	
GP commitment	5.0	5.0%	
Total commitments	**100.0**	**100.0%**	

Fund terms	Value	
First quarter-end date	31-Mar-2023	*Quarter 1 ends on this date. Model runs 40 quarters (10 years).*
Investment period (quarters)	20	*5 years. Calls fund investments, fees and expenses during this period only.*
Investable capital, % of commitments	85.0%	*Deployed evenly across the investment period; the balance covers fees and expenses.*
Management fee - investment period (% of commitments p.a.)	2.00%	*Charged quarterly (1/4 of annual rate) on total commitments.*
Management fee - after investment period (% of opening NAV p.a.)	1.50%	*Netted from distributions once calls stop.*
Fund expenses (% of commitments p.a.)	0.15%	*Audit, admin, legal. Same funding rule as the fee.*
Carried interest	20.0%	*Simplified: 20% of profit once cumulative distributions exceed paid-in capital. No preferred return or catch-up (see README).*
Gross portfolio return (% p.a.)	18.0%	*Applied quarterly to opening portfolio value; new investments are made at quarter-end.*
First exit quarter	17	*Exits begin in year 5, overlapping the end of the investment period.*
Exit rate in first exit quarter (% of portfolio value)	4.0%	*Share of portfolio value realised that quarter.*
Exit rate step-up per quarter	1.5%	*Exit rate rises each quarter (capped at 100%). Any remainder is liquidated in the final quarter.*

Reporting selection	Value	
As-of date for returns metrics (choose a quarter-end)	31-Dec-2028	*Drop-down. DPI / RVPI / TVPI / IRR on the Returns sheet are measured at this date. Set to 31-Dec-2032 for since-inception, fund-end results.*

NAV loan facility (extension)	Value	
NAV loan switch (1 = on, 0 = off)	1	*Off reproduces the original no-loan model exactly. The NAV Loan sheet compares both cases side by side either way.*
Draw quarter (quarter number, single draw)	21	*Default = first quarter after the investment period, once capital calls have stopped.*
Advance rate / LTV (% of portfolio value at draw)	15.0%	*Lender advances this share of the closing portfolio value at the draw quarter-end.*
Maximum facility size ($mm)	15.0	*Cap on the draw: draw = MIN(advance rate x portfolio value, cap).*
Interest rate (% p.a., cash-pay quarterly)	9.00%	*Illustrative assumption: NAV facilities are priced at a premium to senior credit. Charged on the opening balance.*
Upfront arrangement fee (% of draw)	1.00%	*Deducted from the cash paid out to investors.*
Cash sweep: % of exit proceeds applied to repayment	25.0%	*Applied after interest (and post-investment-period fees). Any balance left is repaid in the final quarter.*
		Use of proceeds: the net draw (draw less arrangement fee) is paid to investors as a special distribution, i.e. a dividend recap. It counts towards carry like any other distribution.

Fund cash flows, carry and NAV (quarterly)

US$ millions, flows at quarter-end. Row 6 is the opening balance. Investors are pooled; per-investor figures on the LP Statement sheet are pro rata.

Mechanics: calls = investments + fees + expenses (investment period). After it, fees/expenses are netted from proceeds. Carry = 20% x max(0, cumulative distributions - paid-in). NAV shown net of carry that would be due on a hypothetical liquidation. NAV loan (cols AE–AL) is drawn once, pays cash interest, is swept from exit proceeds, and its net proceeds are distributed. Investor NAV is net of the loan balance. Cols AM–AW re-run the fund with no loan for comparison.

Qtr	Quarter end	Inv. period? (1/0)	Opening portfolio value	Investments	Portfolio gain	Exit rate	Gross exit proceeds	Closing portfolio value	Management fee	Fund expenses	Capital calls	Distributions before carry	Carry paid	Net distributions to investors	Cumulative calls (paid-in)	Cumulative distributions before carry	Cumulative carry paid	Accrued carry (unrealised)	Investor NAV (net of accrued carry)	Cumulative net distributions	DPI	RVPI	TVPI	Net investor cash flow	Net flow for XIRR (to ac-ct, incl. NAV)	Gross fund cash flow	Gross flow for XIRR (to ac-ct incl. NAV)	Unfunded commitment	Carried interest expense (paid + change in accrual)	NAV loan: opening balance	NAV loan: draw	NAV loan: arrangement fee	NAV loan: interest (cash)	NAV loan: repayment	NAV loan: closing balance	NAV loan: net cash distributed at draw	Loan-to-value (loan / portfolio value)	No-loan case: distributions before carry	No-loan: cumulative distributions before carry	No-loan: carry paid	No-loan: cumulative carry paid	No-loan: net distributions	No-loan: accrued carry	No-loan: investor NAV	No-loan: cumulative net distributions	No-loan: net investor cash flow	No-loan: net flow for XIRR (to ac-ct)	TVPI (no-loan case)

Returns summary (investor level, net of fees, loan costs and carry)

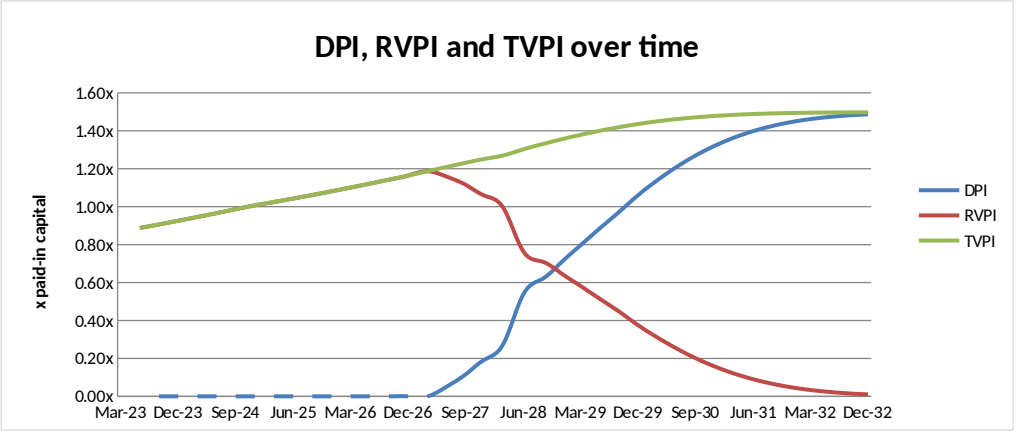

Measured at the as-of date on the Inputs sheet.

As-of date	**31-Dec-2028**
Row index of as-of quarter (helper)	*24*
Quarter number	24

Net (investor) metrics	Value	Definition
Total commitments ($mm)	100.0	*Sum of investor commitments.*
Paid-in capital ($mm)	95.8	*Cumulative capital calls to the as-of date.*
% of commitments called	95.8%	
Unfunded commitment ($mm)	4.3	
Cumulative distributions ($mm)	76.3	*Received by investors, after carried interest.*
Residual NAV ($mm)	55.7	*Portfolio value less NAV loan balance less accrued (unrealised) carry.*
DPI	**0.80x**	*Distributions / paid-in capital. Realised return.*
RVPI	**0.58x**	*Residual NAV / paid-in capital. Unrealised return.*
TVPI	**1.38x**	*DPI + RVPI. Total value / paid-in capital.*
Net IRR (XIRR)	**11.2%**	*Annualised, dated flows: -calls + distributions, with NAV as a terminal value at the as-of date. Levered if the NAV loan is on.*

Gross (portfolio) metrics	Value	Definition
Cumulative investments ($mm)	85.0	
Cumulative gross exit proceeds ($mm)	72.8	
Portfolio value ($mm)	70.7	*Before carry, fees and expenses.*
Gross MOIC	**1.69x**	*(Proceeds + portfolio value) / invested cost.*
Gross IRR (XIRR)	**18.0%**	*On investment and exit flows, before fees, expenses and carry.*
Gross-to-net IRR spread	6.8%	*Cost of fees, expenses and carry.*

Fund life totals (to final quarter)	Value
Total capital called ($mm)	95.8
Total net distributions ($mm)	143.4
Total management fees ($mm)	12.8
Total fund expenses ($mm)	1.5
Total carried interest paid ($mm)	11.9
Final TVPI (all distributed)	**1.50x**

NAV loan extension: impact on investor returns

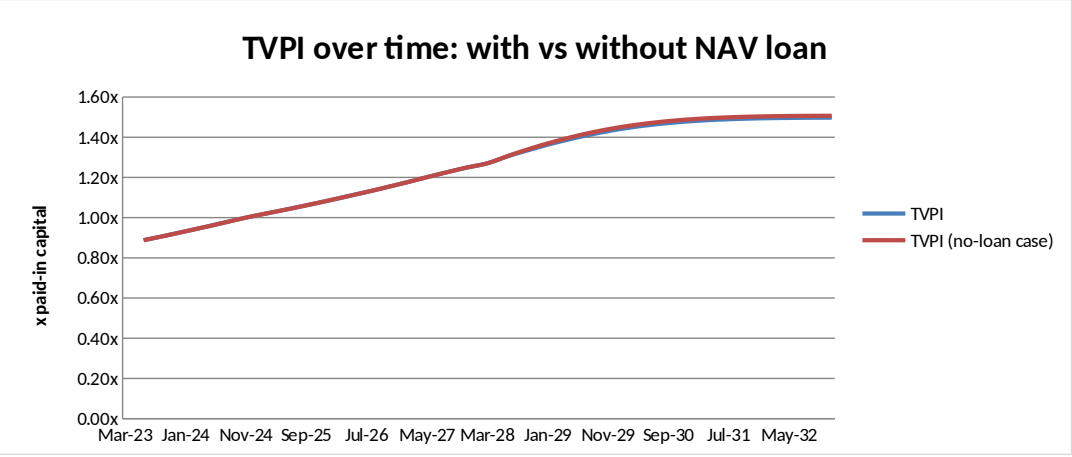

Same fund run twice: with the NAV loan (as set on Inputs) and without it. US$ millions.

NAV loan switch (1 = on)	1	
Draw quarter end	31-Mar-2028	
Advance rate (LTV) / interest rate p.a.	15.0%	9.00%

Investor returns at the as-of date	With NAV loan	Without loan	Difference	Reading it
Paid-in capital ($mm)	95.8	95.8	-	*Capital calls are identical: the loan does not change what investors fund.*
Cumulative distributions ($mm)	76.3	71.3	5.0	*Higher with the loan once the special distribution is paid, until the loan is repaid from exits.*
Residual NAV ($mm)	55.7	61.4	(5.7)	*Lower with the loan outstanding: NAV is net of the debt.*
DPI	0.80x	0.74x	0.05x	*Realised return: pulled forward by the recap.*
RVPI	0.58x	0.64x	-0.06x	
TVPI	**1.38x**	**1.39x**	**-0.01x**	*Total value: reduced by interest and the arrangement fee.*
Net IRR (XIRR)	**11.2%**	**11.2%**	**0.0%**	*IRR rewards getting cash back sooner, which is why sponsors use NAV loans.*

Fund life (to final quarter)	With NAV loan	Without loan	Difference
Total net distributions ($mm)	143.4	144.3	(0.9)
Final TVPI (all distributed)	**1.50x**	**1.51x**	**-0.01x**
Net IRR since inception	**11.8%**	**11.7%**	**0.1%**
Total carried interest paid ($mm)	11.9	12.1	(0.2)

NAV loan summary	Value
Amount drawn ($mm)	14.2
Arrangement fee ($mm)	0.1
Net cash distributed to investors at draw ($mm)	14.1
Total interest paid ($mm)	1.0
Total cost of loan: interest + fee ($mm)	1.1
Total repaid ($mm)	14.2
Peak loan-to-value (loan / portfolio value)	15.0%
Quarter loan is fully repaid	30-Sep-2029

LP capital account statement

Select an investor and a period. Period should start the day after a quarter-end and end on a quarter-end. US$ millions.

Investor	LP A (institutional)
Commitment ($mm)	40.0
Share of fund	40.0%
Period start	01-Jan-2028
Period end	31-Dec-2028

Inputs (change freely). Beginning balance = closing balance at the last quarter-end before the start date.

Statement of capital account	Period ($mm)
Beginning capital balance	**37.9**
Contributions (capital calls)	-
Distributions	(19.7)
Allocated income / (loss):	
Portfolio gains	6.1
Management fees	(0.5)
Fund expenses	(0.1)
NAV loan interest	(0.3)
NAV loan arrangement fee	(0.1)
Carried interest (paid + change in accrual)	(1.0)
Net allocated income / (loss)	4.1
Ending capital balance	**22.3**
Check: fund NAV x share at period end (should equal abo	*22.3*
Difference	-

Inception to period end (memo)	Value
Cumulative contributions ($mm)	38.3
Cumulative distributions ($mm)	30.5
Unfunded commitment ($mm)	1.7
DPI	0.80x
RVPI	0.58x
TVPI	**1.38x**

All investors are pro rata, so ratios and IRR are identical across investors; dollar amounts scale with commitment.

Model integrity checks

All differences should be zero (tolerance 0.001).

Check	Difference	What it tests
Investor commitments sum to fund commitments	0.0000	*Commitment table adds up.*
Calls fully fund investments + fees + expenses in investment period	0.0000	*Commitment is never the binding constraint.*
Cumulative calls never exceed commitments	0.0000	*No over-calling.*
Portfolio fully realised by final quarter	0.0000	*Closing portfolio value in last quarter = 0.*
Investor NAV roll-forward identity (all quarters)	0.0000	*Change in NAV = calls - distributions + gains - fees - expenses - loan interest - loan fee - carry.*
Distributions + carry = distributions before carry	0.0000	*Carry is deducted exactly once.*
Net IRR: NPV of flows at XIRR = 0	0.0000	*Independent test that the XIRR solution is right.*
Gross IRR: NPV of flows at XIRR = 0	0.0000	
TVPI = DPI + RVPI at as-of date (Returns vs Fund time series)	0.0000	
LP statement: ending balance = share of fund NAV	0.0000	*Period statement ties to the fund.*
LP quarterly roll-forward ties to fund NAV (all quarters)	0.0000	
NAV loan fully repaid by final quarter	0.0000	*No debt left when the fund winds up.*
NAV loan drawn = repaid	0.0000	*Total draws equal total repayments.*
Distributions never truncated by loan service	0.0000	*Non-zero means exit proceeds were too small to pay interest and repayment: move the draw quarter or lower the LTV.*
Switch off: with-loan NAV equals no-loan NAV	0.0000	*Confirms the loan layer is inert when off.*

OVERALL STATUS **ALL CHECKS PASS**
