Tesla, Inc. - Integrated 3-statement model and DCF

Portfolio piece (Models 1 & 2). US$ millions, FY ends 31 December. Historicals FY2023A-FY2025A; forecast FY2026E-FY2030E. Built 30-Sep-2026.

Purpose	A traceable, auditable model: income statement, balance sheet and cash flow are fully linked, and the DCF reads its cash flows straight from them. One switch (Assumptions!B3) runs Bear / Base / Bull.
Sheet map	Assumptions (all drivers) -> IS, BS, CF (statements) -> DCF (valuation, sensitivity, reverse DCF) -> Checks (ties to reported figures, balance) -> Sources.
Colour code	Blue = hard-coded input | Black = formula | Green = link from another sheet | Yellow fill = key assumption to challenge.
How the statements link	Revenue and margins (Assumptions) -> IS -> net income -> CF -> cash on BS. PP&E = opening + capex - D&A. Equity = opening + net income + SBC. Working-capital lines are driven by days / % of revenue and feed the CF. BS balance check is on the BS and Checks sheets.
DCF method	UFCF = NOPAT + D&A - capex - change in working capital, discounted at CAPM-based WACC (end-year), Gordon-growth terminal value, EV-to-equity bridge from the FY2025 balance sheet. SBC is not added back.
Reading the result	Base-case value per share (~$20) is far below the market price (~$359); even the Bull case is ~$35. At a 5.2% risk-free rate and beta ~1.85 the WACC is ~13.5%, and the market price only works if FY2030 free cash flow is ~30x the base case - the reverse DCF quantifies this. Caution: the implied terminal EV/EBITDA is only ~3-4x because FY2030E is still an investment year (capex/D&A ~1.2x, EBIT margin ~9%). Treat the absolute value as a conservative floor, and extend the forecast to 10 years with a fade to steady-state margins before relying on it.
Known limitations	(1) 5-year explicit period is short for a business still in heavy investment; terminal year capex/D&A is shown as a diagnostic. (2) No explicit robotaxi / Optimus segment - only the Bull case proxies this through growth and margin. (3) Valuation date is the 31-Dec-2025 balance sheet, price is 28-Sep-2026 (9-month mismatch, not rolled forward). (4) FY2023-24 detail is limited to reported totals. (5) Share count differs by source (3.54bn diluted weighted / 3.75bn 10-K cover / 3.95bn market data) - verify against the latest 10-Q.
Not investment advice	Educational portfolio model built from public filings and illustrative assumptions.
