# Tesla, Inc. - Integrated 3-statement model and DCF

*Portfolio piece (Models 1 & 2). US$ millions, FY ends 31 December. Historicals FY2023A-FY2025A; forecast FY2026E-FY2030E. v2 built 5-Oct-2026 (adds Schedules sheet).*

| | |
|---|---|
| **Purpose** | A traceable, auditable model: income statement, balance sheet and cash flow are fully linked, and the DCF reads its cash flows straight from them. One switch (Assumptions!B3) runs Bear / Base / Bull. |
| **Sheet map** | Assumptions (all drivers) -> Schedules (bottom-up revenue, deferred revenue roll-forward, debt schedule) -> IS, BS, CF (statements) -> DCF (valuation, sensitivity, reverse DCF) -> Checks (ties to reported figures, balance) -> Sources. |
| **Colour code** | Blue = hard-coded input \| Black = formula \| Green = link from another sheet \| Yellow fill = key assumption to challenge. |
| **How the statements link** | Revenue and margins (Assumptions) -> IS -> net income -> CF -> cash on BS. PP&E = opening + capex - D&A. Equity = opening + net income + SBC. Working-capital lines are driven by days / % of revenue and feed the CF. BS balance check is on the BS and Checks sheets. |
| **DCF method** | UFCF = NOPAT + D&A - capex - change in working capital, discounted at CAPM-based WACC (end-year), Gordon-growth terminal value, EV-to-equity bridge from the FY2025 balance sheet. SBC is not added back. |
| **Reading the result** | Base-case value per share (~$20) is far below the market price (~$359); even the Bull case is ~$35. At a 5.2% risk-free rate and beta ~1.85 the WACC is ~13.5%, and the market price only works if FY2030 free cash flow is ~30x the base case - the reverse DCF quantifies this. Caution: the implied terminal EV/EBITDA is only ~3-4x because FY2030E is still an investment year (capex/D&A ~1.2x, EBIT margin ~9%). Treat the absolute value as a conservative floor, and extend the forecast to 10 years with a fade to steady-state margins before relying on it. |
| **Known limitations** | (1) 5-year explicit period is short for a business still in heavy investment; terminal year capex/D&A is shown as a diagnostic. (2) Debt tranche split, rates and the deferred-revenue recognition rate are estimates built from Q1-2026 10-Q disclosures (not the full FY2025 10-K notes, which could not be downloaded) - verify against the 10-K debt and revenue notes. (2b) No explicit robotaxi / Optimus segment - only the Bull case proxies this through growth and margin. (3) Valuation date is the 31-Dec-2025 balance sheet, price is 28-Sep-2026 (9-month mismatch, not rolled forward). (4) FY2023-24 detail is limited to reported totals. (5) Share count differs by source (3.54bn diluted weighted / 3.75bn 10-K cover / 3.95bn market data) - verify against the latest 10-Q. |
| **Not investment advice** | Educational portfolio model built from public filings and illustrative assumptions. |

**Key outputs (live)**

| | |
|---|---|
| Active scenario | **Base** |
| WACC | **13.51%** |
| Enterprise value ($mm) | **40,678** |

| Discount period (years) | | 1.0 | 2.0 | 3.0 | 4.0 | 5.0 | |
| Discount factor | | 0.881 | 0.776 | 0.684 | 0.602 | 0.531 | |
| **PV of UFCF** | | **(8,578)** | **(2,634)** | **1,283** | **3,253** | **4,384** | |

### Cost of capital (WACC)

| | | |
|---|---|---|
| Risk-free rate | 5.24% | |
| Equity beta | 1.85 | |
| Equity risk premium | 4.50% | |
| Cost of equity (CAPM) | 13.57% | *Cost of equity dominates: debt is <1% of capital at market values.* |
| Pre-tax cost of debt | 5.50% | |
| Tax rate (terminal year) | 25.00% | |
| After-tax cost of debt | 4.13% | |
| Share price ($) | $358.54 | |
| Diluted shares (mm) | 3,950 | |
| Market capitalisation ($mm) | 1,416,233 | |
| Debt & finance leases ($mm, FY2025A) | 8,376 | |
| Equity weight E/(D+E) | 99.4% | |
| Debt weight D/(D+E) | 0.6% | |
| **WACC** | **13.51%** | *A ~13-14% WACC reflects a 5.2% risk-free rate and a beta near 1.85.* |

### Terminal value & enterprise value

| | | |
|---|---|---|
| Terminal growth rate | 3.00% | |
| Terminal-year UFCF (FY2030E) | 8,262 | |
| Terminal value at FY2030E (Gordon growth) | 80,971 | |
| PV of terminal value | 42,970 | |
| Sum of PV of UFCF (FY2026E-30E) | (2,292) | |
| **Enterprise value** | **40,678** | |
| Terminal value as % of EV | 105.6% | |
| Implied terminal EV / EBITDA (FY2030E) | 3.6x | *Sanity check on the perpetuity: a mature auto/energy business typically trades 6-12x EBITDA.* |
| Terminal-year capex / D&A | 1.1x | *Should sit near 1.0-1.3x in steady state; much higher means terminal FCF is understated, much lower means it is overstated.* |

### Enterprise value to equity value per share

| | | |
|---|---|---|
| Enterprise value | 40,678 | |
| Less: debt & finance leases | (8,376) | |
| Plus: cash, cash equivalents & investments | 44,059 | |
| Plus: digital assets | 1,008 | |
| Less: non-controlling interests | (728) | *Balance-sheet items at 31-Dec-2025. Operating leases not treated as debt (consistent with UFCF after lease cost).* |
| **Equity value** | **76,641** | |
| Diluted shares (mm) | 3,950 | |
| **Implied value per share ($)** | **$19.40** | |
| Current share price ($) | $358.54 | |
| Upside / (downside) vs. current price | (94.6%) | *The gap to market price is the main finding: see reverse DCF below.* |

### Sensitivity: implied value per share ($) - WACC (down) vs. terminal growth (across)

| WACC \ g | 2.0% | 2.5% | 3.0% | 3.5% | 4.0% |
|---|---|---|---|---|---|
| **11.5%** | $21.66 | $22.44 | $23.33 | $24.32 | $25.44 |
| **12.5%** | $19.84 | $20.46 | $21.15 | $21.91 | $22.76 |
| **13.5%** | $18.36 | $18.86 | $19.40 | $20.00 | $20.66 |
| **14.5%** | $17.13 | $17.54 | $17.98 | $18.46 | $18.98 |
| **15.5%** | $16.10 | $16.43 | $16.79 | $17.19 | $17.61 |

*Centre cell (highlighted) equals the base-case value per share above.*

### Reverse DCF: what the market price implies

| | | |
|---|---|---|
| Market capitalisation ($mm) | 1,416,233 | |
| Implied market EV ($mm) | 1,380,270 | *Market cap + debt - cash - digital assets + NCI.* |
| Less: PV of modelled FY2026E-30E UFCF | 2,292 | |
| PV of terminal value the market requires | 1,382,562 | |
| Required terminal value at FY2030E | 2,605,228 | |
| Required FY2030E UFCF at model WACC and g | 265,822 | |
| Modelled FY2030E UFCF | 8,262 | |
| **Required / modelled terminal UFCF** | **32.2x** | *How many times higher FY2030E free cash flow must be for today's price to be justified at this WACC - the robotaxi / Optimus optionality the market is paying for.* |

## Model integrity checks

*Differences should be zero. Reported figures are hard-coded inputs from Tesla filings; tolerance 0.5.*
